

Product Description & Applications -

Description and uses This is a factory-made blend that consists of cement, aggregates, sands, and specially formulated additives.

POSTFIX is a specially designed fast setting concrete, ideally suited to erecting all types of posts.

Features

- Available in 20kg water resistant bags.
- Quick and easy to use, just add water.
- Rapid setting, 5 - 10 mins

Using Postfix

Please refer to detailed instructions on reverse of the bag. Use at an ambient temperature of between 5 - 25 degrees Celsius. Do not use when ground is frozen or ambient temperature is below 5 degrees Celsius.

Typical results

Postfix will start to set between 5 to 10 minutes and will typically give a strength of more than 20N/mm² after 28 days.

Storage Information

Storage conditions Postfix comes in a waterproof sealed bag and should be stored unopened until used. Always keep off the ground on a pallet. 12 months shelf life if stored correctly.

Health & Safety Information

All Health & Safety guidance and advice can be access through the Material Safety Data Sheet (MSDS).
